

peri-mittari

perimeter lighting solutions

perimeter lighting solutions

When it is the expression of light that is important and not seeing the luminaire itself, Peri-mittari, by PMC Lighting, has the lighting solution. Peri-mittari excels at offering a myriad of perimeter lighting solutions to showcase your space. Whether you need to illuminate a vaulted ceiling or graze a textured wall surface, we design a lighting system tailored for your application. Made in our factory in the United States, we customize lengths, ceiling integrators, diffusers and finishes to offer the ideal combination of form and function to enhance your architectural space.

linear systems to illuminate from hidden spaces

wallwashing perimeter systems

Peri-mittari offers multiple sizes and configurations of linear systems to illuminate the wall surface. These systems emphasize even illumination of the wall surface and contribution of lighting into the general ambient space. Most luminaires in this category utilize reflectors, hidden lamp(s) and an open aperture.

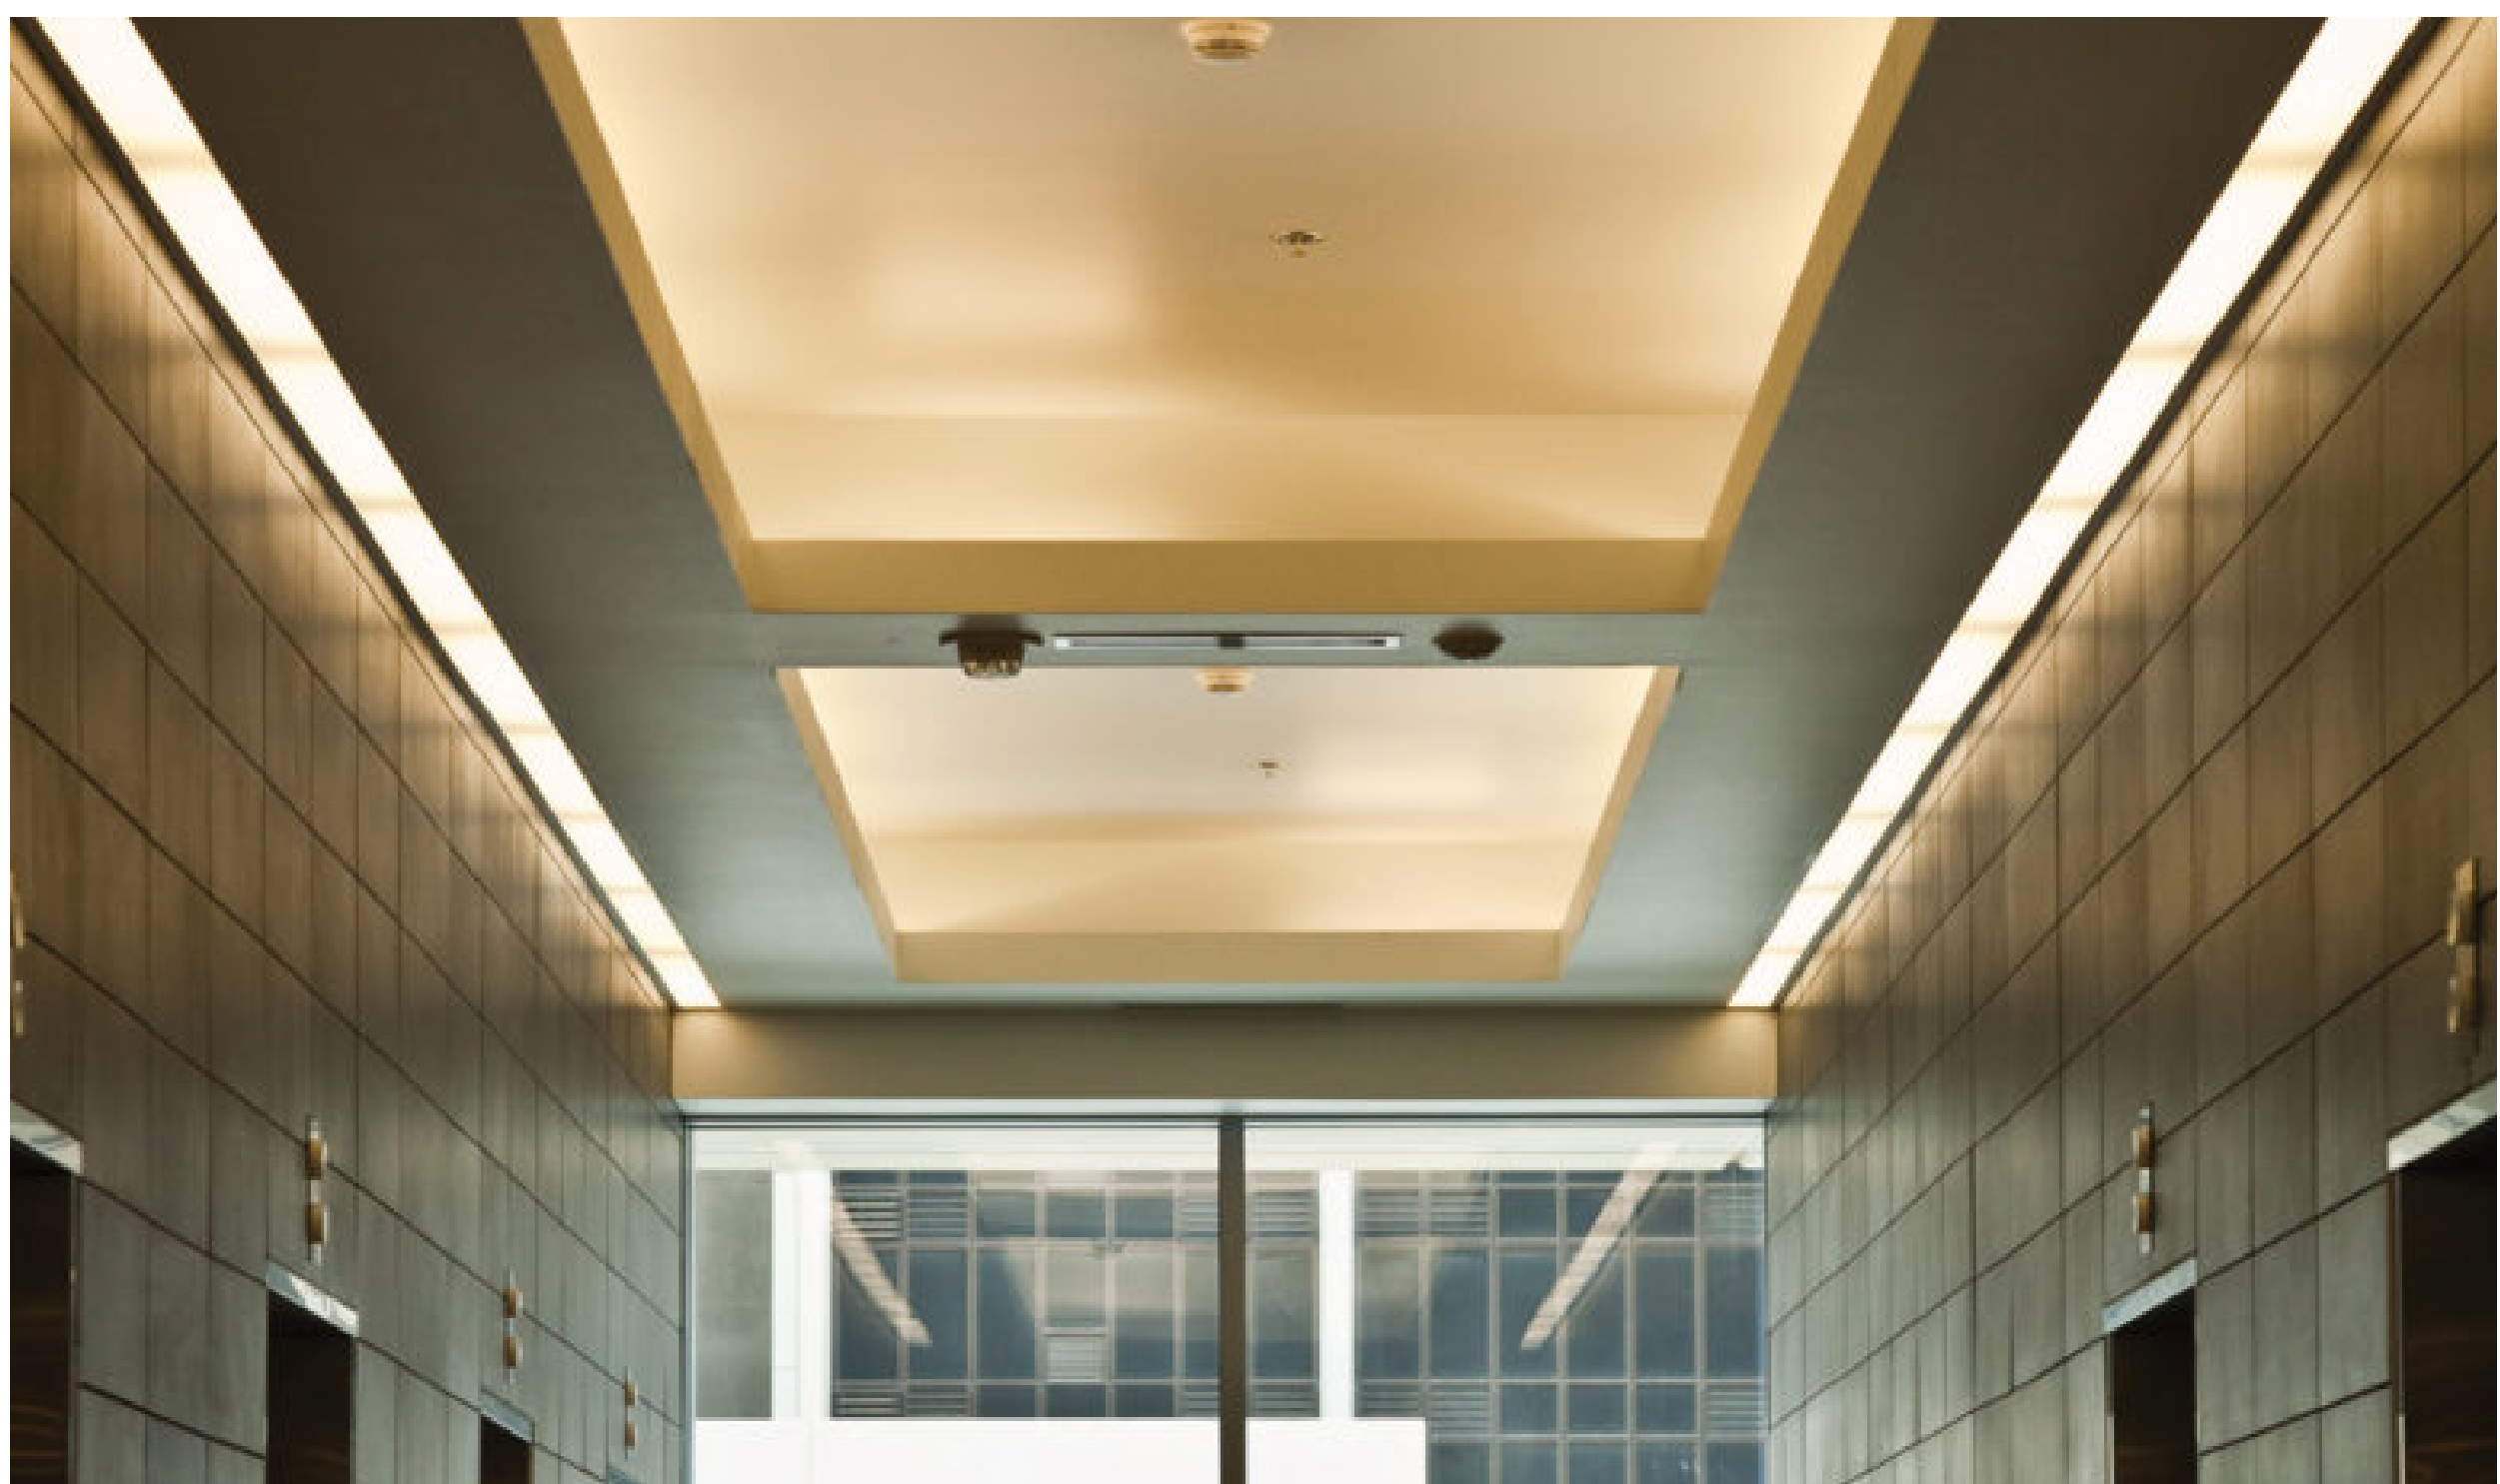

wallgrazing perimeter systems

Peri-mittari offers multiple sizes and configurations of linear systems to illuminate the wall surface. These systems provide direct light source highlighting/accenting the wall surface. Functionally they graze the wall surface and are characterized by frequent use of architectural diffusers including lenses, louvers and cross blades.

cove systems

Peri-mittari addresses the cove application with multiple options, sizes and lamp configurations from which to choose.

When the cove is already built out, we provide the optical performance with our indirect cove series. With an adjustable feature, our asymmetric distribution can be customized in the field for optimal lighting performance.
